

ALLERGY EHR

EXTENDED PROFILE

OVERVIEW

Allergy EHR is an integrated solution designed for the allergy and immunotherapy sector. The solution encompasses features including flexible charting styles, patient scheduling, a skin testing module plus full document and image management. The solution is cloud-based allowing access through a web browser from anywhere. It is compatible with both Mac and Windows environments.

Clinicians are able to use Allergy EHR to track the environmental and allergy histories over customizable periods of time and create bespoke treatment plans for patients. Features built for the allergy sector include a module to manage vials, generate recipes and schedule and administer shots. Allergy EHR also includes reaction treatment and checking, with the ability to change recipes quickly.

The system automatically updates to regulatory changes, including both lab orders and tracking functionality through which practice staff can track diagnostic and lab orders, send new ones electronically plus view and compare graphical representations of lab results and data.

Faxes can be received directly into a patient's electronic record while a series of pre-written mail templates allow letters and forms to be generated quickly. A separate module adds on e-prescription functions while the billing package manages payment workflows, insurance claims, automatic reconciliation and financial reporting.

FEATURE OVERVIEW

- ✓ Scheduling
- ✓ Appointment Management
- ✓ Billing Management
- ✓ Medical Templates
- ✓ Document Management
- ✓ Clinical Workflow
- ✓ EM Coding
- ✓ Lab Integration
- ✓ Patient History
- ✓ Reporting and Analytics
- ✓ Voice Recognition
- ✓ Patient History / EMR
- ✓ E&M Coding
- ✓ Reporting / Analytics
