

REDOC POWERED BY XFIT EXTENDED PROFILE

OVERVIEW

ReDoc powered by xfit is an EHR aimed specifically at rehab therapy professionals working in both hospital and private practice environments. It can be used by physical therapists, occupational therapists, and speech language pathologists to complement and streamline therapy workflows.

ReDoc offers exact compliance with key rehab requirements - it is also fully interoperable. The software integrates with FOTO (Focus of Therapeutic Outcomes) and to other essential rehabilitation software. It is fully interoperable, and the HL7 interface provides for a seamless exchange of information so that records and results never get stuck or sent back.

As a cloud-based platform, it allows medical practitioners to access key information on the go and helps with remote management of the practice. ReDoc can also increase practice efficiency through an optional appointment and scheduling tool, electronic faxing and fully accessible exercise management and home exercise program.

Dedicated support is offered five days a week, twelve hours a day on request. This includes pre-implementation planning and on-site training as well as continued education and training.
